

INDICATION

Estimates the risk of stroke after a suspected transient ischemic attack (TIA).

Used to identify patients with TIA who are at very low risk of stroke and may be appropriate for an outpatient follow-up as well as those who are at increased risk and may need admission.

INTERPRETATION

SCORE	RISK	RISK %
0 - 3	Low risk	2 Day: 1.0%
		7 Day: 1.2%
		90 Day: 3.1%
4 -5	Moderate risk	2 Day: 4.1%
		7 Day: 5.9%
		90 Day: 9.8%
6 -7	High risk	2 Day: 8.1%
		7 Day: 11.7%
		90 Day: 17.8%

CALCULATION

Total score = sum of scores for each question

Age ≥ 60 years	Yes	+1
	No	+0
BP ≥ 140/90 mmHg	Yes	+1
	No	+0
Clinical features of the TIA	Unilateral weakness	+2
	Speech disturbance without weakness	+1
	Other symptoms	+0
Duration of symptoms	<10 mins	+0
	10-59 mins	+1
	≥ 60 mins	+2
History of diabetes	Yes	+1
	No	+0
