

INDICATION

Identifies risk of in-hospital mortality in patients with confirmed or suspected infection.

For use in adult patients in a non-ITU setting.

ADDITIONAL INFORMATION

**Note:** qSOFA is a mortality predictor and not a diagnostic test for sepsis.

INTERPRETATION

SCORE	RISK GROUP
0-1	Not high risk for in-hospital mortality
2-3	High risk for in-hospital mortality 3 - 14 times increase

CALCULATION

Total score = sum of scores for each question

GCS < 15	Yes	+1
	No	+0
Respiratory rate ≥22	Yes	+1
	No	+0
Systolic BP ≤100	Yes	+1
	No	+0
